

GENAI DIGITALIZATION APPLICATION

1. Project Overview

GenAI & Rural Digitalization Applications is a collection of 15+ Android applications developed using modern Android technologies and Generative AI-assisted development.

The applications focus on practical areas such as rural services, education, healthcare, sports, tourism, culture, and digital accessibility.

Goal: To use modern AI-assisted development to quickly transform real-world problems and ideas into useful mobile applications.

2. How It Works

Problem Identification → UI/UX Design → GenAI-Assisted Development → Android App → Firebase/API Integration → Testing

- Identify a real-world problem or requirement.
- Design a simple and accessible mobile interface.
- Use Generative AI to assist with development and implementation.
- Build the application using Android technologies.
- Integrate Firebase and APIs where required.
- Test and refine the application.

3. Technologies Used

Kotlin · Android · Jetpack Compose · Firebase · Generative AI · APIs

4. Key Outcome

Developed and explored 15+ application concepts, gaining practical experience in:

- Android application development
- Modern UI development
- Firebase integration
- API integration
- GenAI-assisted coding
- Rapid prototyping
- User-focused product development

5. Featured Applications

Namma Pustaka — Digital reading/library concept focused on making educational and reading resources more accessible.

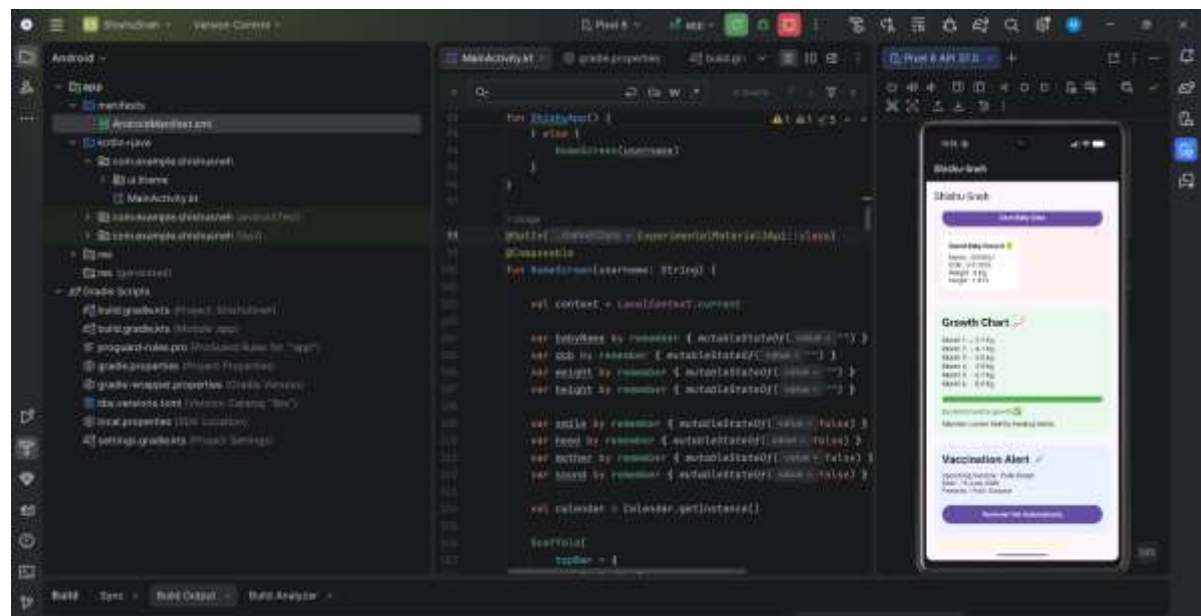

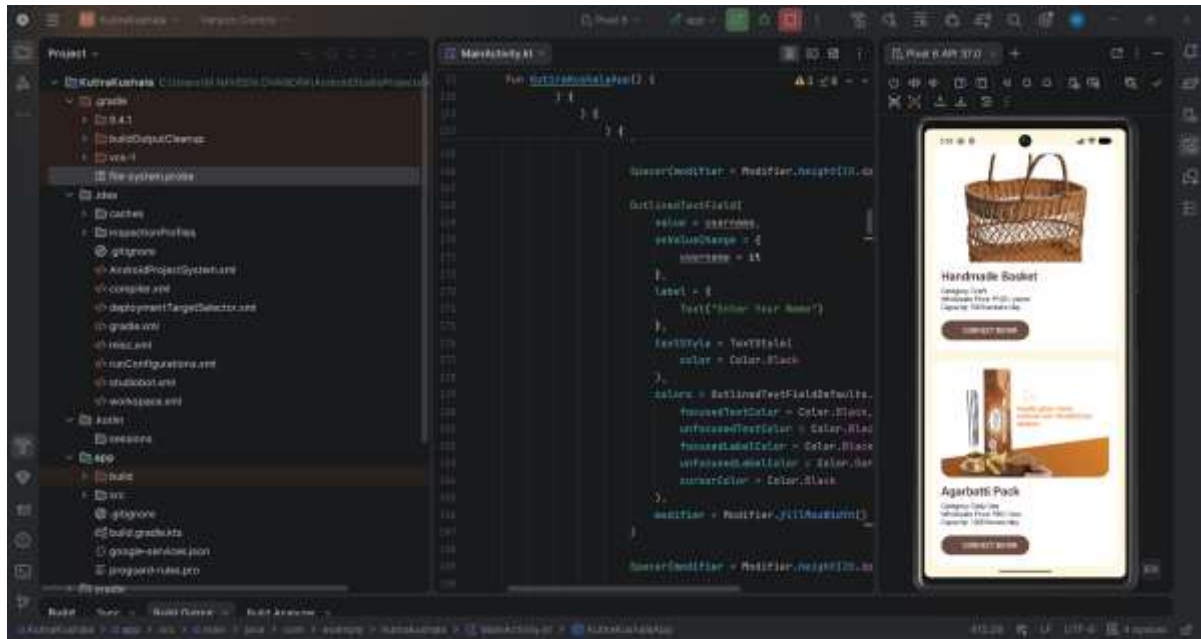

Kreeda Ankanaa — Sports-focused application concept for organizing and presenting sports-related information.

Nalla Nudi — Application concept focused on language, culture and regional content.

Kutira Kushala — Community/rural-focused digital solution designed around useful local services and information.

6. Future Scope

These applications can be further developed with AI-powered features, multilingual support, improved accessibility, cloud integration, authentication, analytics, and deployment to the Play Store.
